

Self-Recommendation Letter for Java Developer Position

Dear Hiring Manager,

I am writing to express my strong interest in the Java Developer position at your esteemed company. My name is Cao Xiaodong, and I am 34 years old with 8 years of relevant work experience in Java development. I am eager to join your team, and the following is a brief introduction of myself.

Previously, I worked at Digital China Technology Co., Ltd., where I was deeply involved in fintech and banking projects. During my tenure there, I focused on the development and optimization of core enterprise systems, including anti-money laundering systems, personal identity verification systems, and merchant management systems—all of which are crucial solutions for ensuring financial security and operational efficiency.

I hold a bachelor's degree in Metallic Materials Engineering from Xi'an Technological University. Prior to 2017, I worked at an auto parts company in Shanghai. However, the outdated traditional production processes, uninnovative work content, remote location, unsatisfactory salary, and intensive six-day workweek filled me with deep anxiety about my future career. Determined to turn my life around and shape a better future, I successfully switched to a career in Java development through self-directed learning. This journey not only honed my technical skills but also demonstrated my resilience in the face of challenges and my passion for this field.

Over the past 8 years, I have accumulated extensive development experience through work and continuous learning. On the backend development front, I am proficient in technologies such as Spring Boot, Spring Cloud, Nacos, Docker, Oracle, MySQL, Redis, and MyBatis. In the field of frontend development, I have mastered practical tools including React, HTML, CSS, TypeScript, and JavaScript. These skills enable me to collaborate efficiently with cross-functional teams and contribute to the development of end-to-end solutions. To further deepen my professional capabilities and share technical insights, I have built and maintained a personal technical blog using Spring Boot and React—feel free to visit it if you are interested in learning more about my technical thinking and project practices.

All my previous work experience has been accumulated in China, and I am now actively seeking job opportunities in Singapore. I am deeply attracted by Singapore's advanced corporate culture, sound labor protection regulations, and the respect shown to professional talents. I firmly believe that with my solid technical capabilities, practical experience in core systems, and proactive learning attitude, I can become a valuable member of your team and contribute to its development.

Thank you for considering my application. I am very much looking forward to the opportunity to have an in-depth communication with you to discuss how my skills and experience align with your company's needs. Please feel free to contact me at your convenience to arrange an interview.

Sincerely,

Cao Xiaodong
